Problem Statement

Analyze Zomato restaurant data to understand restaurant performance, customer ratings, pricing, online ordering, table booking, cuisine preferences, and geographic distribution.

01

Raw and incomplete data

The dataset contains missing ratings and cost values, plus two unnecessary index columns.

02

Cuisine data is difficult to compare

Many restaurants list multiple cuisines, making direct category analysis harder.

03

Important patterns are hidden

With 7,105 restaurant records, it is difficult to quickly compare ratings, prices, areas and services.

04

Business decisions need evidence

Zomato needs clear insights to identify improvement opportunities in online ordering, table booking and customer experience.

Our objective: Clean and process the data, build an interactive Power BI dashboard, and recommend data-driven actions for Zomato.

Observations from the raw data

7,105 × 12

Raw dataset size

7,105 restaurants and 12 columns across 30 Bangalore areas, including 2 unnamed index columns.

125 gaps

Missing rating and cost

68 restaurants have no rating and 57 have no cost, affecting 121 restaurants in total.

74%

List more than one cuisine

5,282 restaurants list 2 or more cuisines, giving 2,175 unique combinations that cannot be charted as they are.

₹6,000 max

Skewed cost for two

The median is ₹400 but the average is ₹540, because a few very expensive restaurants pull it up.

From raw data to final data

1

Load

Read the CSV in Google Colab with Latin-1 encoding.

2

Drop

Removed the 2 unnamed index columns.

3

Check

Found 68 missing ratings and 57 missing costs, with no duplicate rows.

4

Remove

Dropped 121 rows (1.7%) so no rating is invented.

5

Create

Added primary cuisine, type group and cost range columns.

Raw data

7,105 rows × 12 columns

→

Final data

6,984 rows × 14 columns

0 missing values
0 duplicate rows
4 new columns

Solution: the final clean dataset

Restaurant	Area	Primary cuisine	Rating	Cost (₹)	Cost range
#FeelTheROLL	Bellandur	Fast Food	3.4	200	≤200
#refuel	Bannerghatta Road	Cafe	3.7	400	201-400
'@ Biryani Central	Marathahalli	Biryani	2.7	550	401-600
'@ The Bbq	Bellandur	BBQ	2.8	700	600-800
'@Italy	Banashankari	Italian	4.1	700	601-800
'@North Parontha Hut	Indiranagar	North Indian	2.8	300	201-400

14 columns in total: the 10 original columns plus 4 we created (primary cuisine, type group, cost range and cost range order). Sample of 6 of the 6,984 rows.

What we did with it

Cleaned

Removed 121 incomplete rows and 2 index columns.

Enriched

Added primary cuisine, type group and cost ranges.

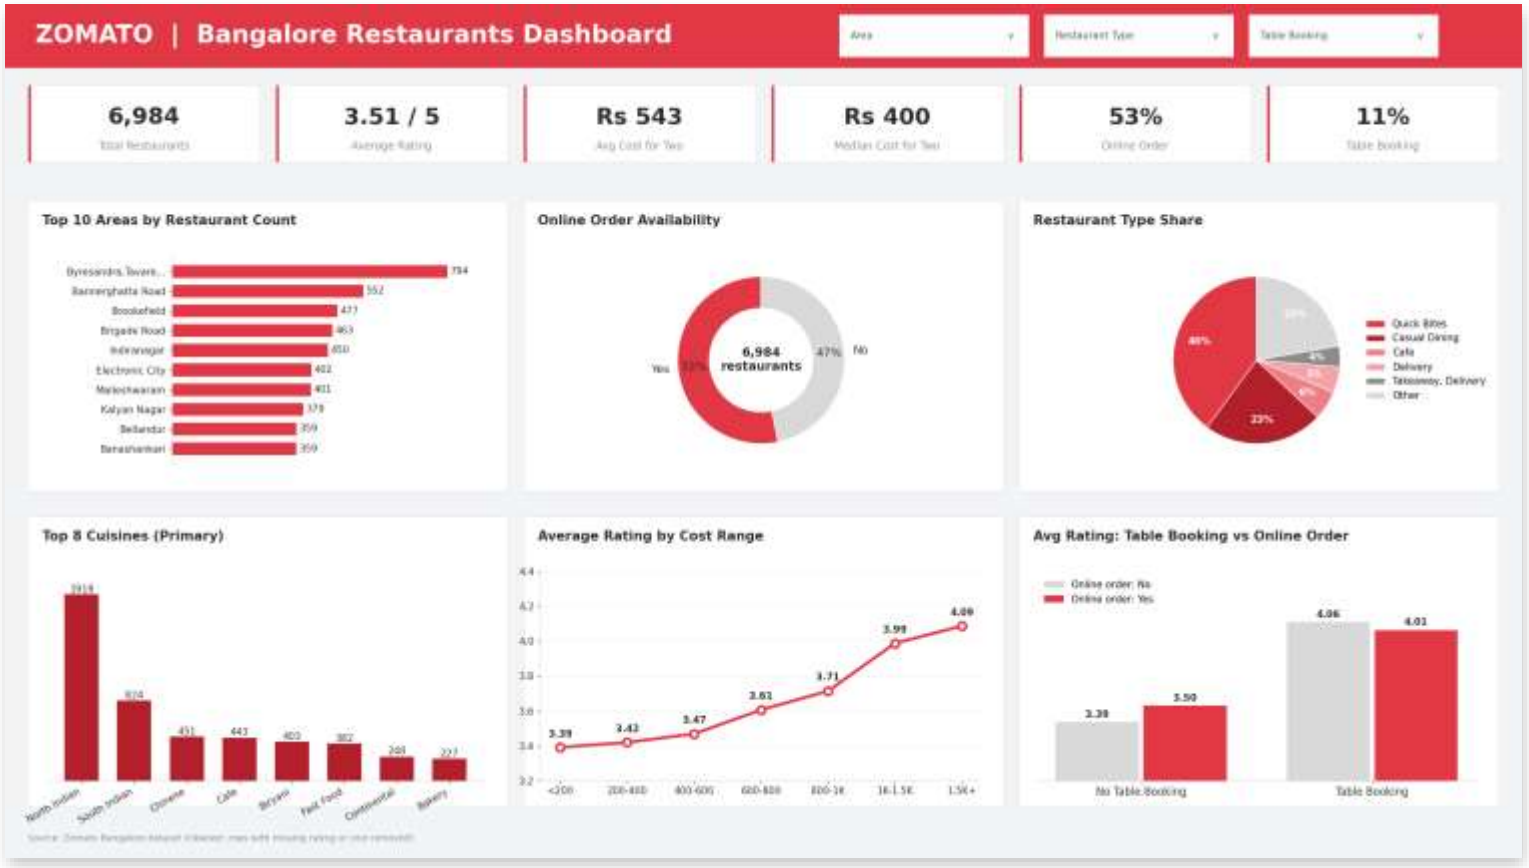

Measured

Built 6 KPIs plus top 10 area and top 8 cuisine measures.

Visualised

Made 6 charts and 3 slicers in a Power BI dashboard.

Dashboard and key insights

Power BI dashboard: 6,984 restaurants across 30 Bangalore areas

Key insights

Higher price, higher rating

Average rating climbs from 3.39 (up to ₹200) to 4.09 (above ₹1,500).

Table booking stands out

Rated 4.04 on average against 3.45 without, yet only 11% offer it.

Quick Bites rate below average

The largest group, 40% of restaurants, averages 3.40 against 3.69 for cafes.

Location matters

Among larger areas, Brigade Road averages 3.68 while Electronic City averages only 3.36.

Recommendations for Zomato

Grow table booking

Only 11% offer it, yet those restaurants rate about 0.4 higher even within the same price band. Push onboarding for mid and high price restaurants.

Close the online ordering gap

47% of restaurants are not online. Among larger areas the online share is lowest in Koramangala 4th Block (25%) and Brigade Road (41%).

Lift Quick Bites and budget quality

They are 40% of listings and average 3.40. Offer rating-improvement support and highlight the best performers.

Focus on weaker areas

Among larger areas, Electronic City (3.36), HSR (3.39) and Marathahalli (3.41) rate lowest. Run local partner support and campaigns there.

Build more reviews

58% of restaurants have under 50 ratings. Prompt reviews after orders, and promote highly rated niche cuisines such as American (3.98) and Asian (3.95).
